

Homework 2

CPSC8430: Deep Learning

Prateek Choudavarp

GitHub Repository - GitHub

- Due to size constraints, I had to upload the trained model to Google Drive, which is 49MB, but GitHub only accepts a maximum capacity of 25 MB.
- I request TA to consider this, download the **Prateek_Choudavarp_seq2seq_model.h5** file available in the link below, and then execute the **test_seq2seq.py** file using **hw2_seq2seq**. The sh script follows the instructions above.
- Trained Model Link -
 - https://drive.google.com/file/d/1IXquJuc0_-XsUq5aK9n9jgkz-SXl1EtT/view?usp=sharing
- Google shows this pop, 'Google Drive can't scan this file for viruses'; please ignore it and continue downloading it. It is safe to download.
- I hope TA will consider this.
